

First Bananacoin investors have just seen banana plantations for themselves

We got a series of freshly made interviews with Telegram lottery winners. People who won a trip to Asia and travelled to Laos to see Bananacoin plantations with their own eyes.

***“ Bananacoin
in one word?
The real one! “***

— Oleg Morozov Vietnam

Oleg has been living in Vietnam for over 10 years now investing in real estate and exporting fruits from Vietnam to Russia as well.

“ Why have I decided to invest? The name really stands out. And the beauty of the plantations are very impressive. I couldn't be happier with my investment! “

— Alexander Halturin, Ekaterinburg

Alexander came all the way from Ekaterinburg. Entrepreneur and enthusiast, owner of professional security agency. Alexander is engaging into all kinds of new projects, starting from 3D Printers and extending to the mining and crypto projects investments.

**Don't forget to turn on subtitles on your language*

By the way you can chat with our winners in our Russian [Telegram Chat](#).

And as a bonus we have one more interview for you, this time with a representative of Japanese Crypto community, which is really curious about Bananacoin development.

Mr. Takeuchi is a mystery man. He was very shy on camera and asked us not to show his face. Er respect that.

Watch interview

For those who don't speak Japanese here is a translation.

"At first I had doubts about the reality of the project. I was not sure if the plantations were real. But I came over and I saw them with my own eyes. They are as real as it gets. So year, it's definitely a good investment.

Moreover the projects is profitable not only for tej team and investors. Locals have their fair share too, which is good for the country developments and important for me personally."

Bananacoin digest

By the way the economic situation in Laos in general is getting better. China have signed 4 M credits for a high-speed railway which will connect Singapore, Laos and China and will accelerate the region development. [Learn more.](#)

Today is raining with good news. Bananacoin is not planning to stop on its achievements. On the contrary the company is constantly working to improve its performance. We have invited leading innovative agronomists to take soil and water samples. Based on the studies conducted, scientists have prepared a forecast on how to increase the harvest up to **3 times per year** while fully conserving the Eco component. Super effective eco-friendly fertiliser was developed and planned to put into practice in the near future.

One more real indicator of result oriented work is the irrigation system and electricity, which were conducted in Bananacoin plantations. We have paved 12 kilometres of the road, conducted electricity in the plantation and local village. We have made a central pool to collect and settle water, which then goes through the pipes to the plants: in a certain hour the sprinkler system starts to make our bananas the most delicious and juicy ones.

Also little by little we cultivate and growth mango. It grows for a long time, but the result is worth it. Perhaps over time it will be the time for **Mangocoins!**?

And one more super news! When reached Soft cap in 2.5M we will be able to **pay dividends in 6 month**, not 18 like planned through the purchase of a ready plantation, not a jungle cultivation.

Let us remind you that Bananacoin Closed Sale are about to be over. **November 29 we are announcing TGE start.**

Hurry up don't miss the last chance. Invest in the tokens of the first block chain oriented Eco banana plantation in Laos. We grow Lady fingers bananas in our Laos plantation exporting them to China where a demand is currently exceeding the offer. This week only. Only till November 29. [Get a 15% off.](#)
